

Table VS4. Training compounds containing the hydroxamate–vinyl– para-benzyl–nitrogen fragment shared with panobinostat and series IX.

The 1,811 training structures in `data/train_set.csv` were searched with RDKit 2026.03.4 using `useChirality=True` and the SMARTS pattern

The `[CH2]` requirement distinguishes the benzyl group from a carbonyl carbon directly attached to nitrogen. The search returned 19 compounds: 16 labelled active (1) and three labelled inactive (0). The row number refers to the data row in the training CSV, excluding its header. SMILES and labels are reproduced from that file.

Training row	SMILES	Label
16	<chem>OC[C@H](Cc1c[nH]c2c1cccc2)NCc1ccc(/C=C/C(NO)=O)cc1</chem>	1
72	<chem>ONC(/C=C/c1ccc(CN(c(ccc(Br)c2)c2/C2=C3/Nc(cccc4)c4\C/3=N/O)C/2=O)cc1)=O</chem>	1
